

AI Data Assistants for Alation

Achieve viral adoption and engagement with
zero learning curve

We rapidly create and deploy
chatbot assistants using Alation
content and prebuilt integration!

What Do We Do?

We help data leaders put the power of gen AI LLMs and enterprise-specific knowledge at everyone's fingertips to grow their data culture and career. AI assistants are the modern, high-productivity approach for sharing, learning, and using enterprise data assets. Even better, we have pre-integrated Alation so its content can be rapidly made chatbot-ready.

How Do We Do It?

We offer three simple Bronze, Silver, and Gold engagement packages that make it easy and cost-effective to get started. Each package includes a prescriptive, step-by-step approach that our consultants use to switch on a private and secure AI stack, connect it to Alation, and start letting users interact.

Our Benefits

Quick Time to Value

We count time to value in days and weeks. Our philosophy is to listen carefully to user feedback then iterate and adjust quickly.

Viral Enterprise Adoption

AI Data Assistants are the 'killer app'. Zero learning curve and packed with all the knowledge the enterprise needs.

IP Security & Safety

We implement using the Microsoft AI stack for one simple reason. They are the most mature and committed, in writing to IP security.
